Project Initialization and Planning Phase

Date	30 September 2026
Team ID	6ab3ec14b5170a9b58b3a658
Project Name	Implement Client Script and UI Policy
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-defined customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Project-specific problem statement:

In a ServiceNow application, users need forms that are easy to use and respond correctly to the information they enter. Without proper client-side validation and dynamic form behavior, users may enter incorrect information, see unnecessary fields, or miss required fields. The proposed project implements Client Scripts and UI Policies to make form behavior dynamic, improve data validation, and provide a better user experience.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS 1	a ServiceNow user or administrator	complete and manage forms easily with correct information	fields may not dynamically change or validate user input properly	manual form handling can cause incorrect data and a confusing user experience	frustrated and concerned about errors in the form

Finalized Customer Problem Statement

“As a ServiceNow user or administrator, I want forms to automatically respond to my inputs and validate information, but without Client Scripts and UI Policies, forms can be difficult to use and may allow incorrect or incomplete information. I need dynamic form behavior and client-side validation so that users can complete forms accurately and efficiently.”
