Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives – what they Say, Think, Do, and Feel – in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "The form should be easy to use." • "I want the correct fields to appear based on my selection." • "I should get clear messages when a field needs attention."	**PERSONA NAME** *ServiceNow User / Agent* End User	**THINKS** • The form should guide me without confusion. • The system should reduce unnecessary data entry. • Client-side rules should work consistently.
DOES • Enters and updates information in ServiceNow forms. • Selects options and checks required fields. • Uses the form based on the rules configured by the administrator.		**FEELS** • Confident when the form is simple and clear. • Frustrated when unnecessary fields or errors appear. • Satisfied when the form responds automatically to user actions.

Project Focus: Using Client Scripts and UI Policies to make ServiceNow forms more dynamic, user-friendly, and efficient.
