Project Name	Implement Client Script and UI Policy
Maximum Marks	2 Marks

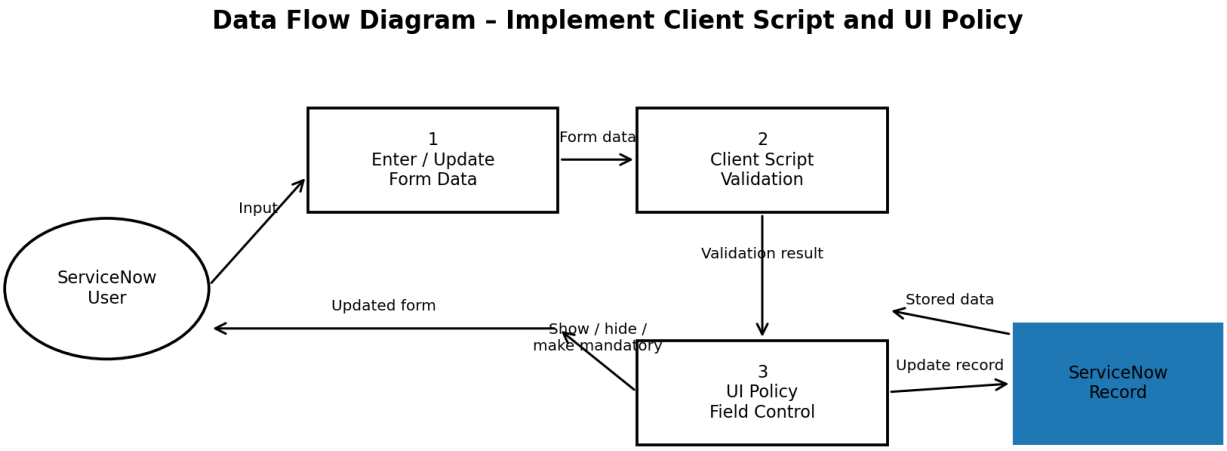

Data Flow Diagram

The Data Flow Diagram (DFD) shows how data moves through the ServiceNow application when Client Scripts and UI Policies are used. The user enters or updates information in a form. The Client Script validates or responds to the input, while the UI Policy controls the visibility, mandatory status, and availability of fields. Valid data is then stored in the ServiceNow record.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person or organization outside the process that sends or receives data, such as a ServiceNow user.
Rectangle with numbered header	Process	An activity that transforms or validates incoming data, such as Client Script validation or UI Policy control.
Rectangle (solid fill)	Data Store	A place where information is stored for later use, such as a ServiceNow record.
Labeled arrow	Data Flow	The movement of data between the user, processes, and the data store.

Filled DFD for the Project

DFD Flow Explanation

1. The ServiceNow User enters or updates information in the application form.

2. The Client Script checks the entered data and performs client-side validation or actions.

3. The UI Policy dynamically controls fields by making them visible, hidden, mandatory, or read-only according to the selected conditions.

4. After the form data is processed, the relevant information is stored in the ServiceNow Record.

5. The updated form is shown to the user with the appropriate field behavior.
