Team ID	6ab3ec14b5170a9b58b3a658
Project Name	Implement Client Script and UI Policy
Maximum Marks	3 Marks

Sure. Based on your uploaded **Solution Requirements** template, here are the completed answers for your project **"Implement Client Script and UI Policy."** The template has 8 Functional Requirement categories and 6 Non-Functional Requirement categories.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	**Authentication**	Users should securely log in to ServiceNow using their authorized account. Only authenticated users can access the required forms and system features.	High
2	**Authorization levels**	Admin users can create and modify Client Scripts and UI Policies. Normal users can use the configured forms according to their assigned permissions.	High
3	**External interfaces**	The solution works with the ServiceNow web interface and browser. Client Scripts and UI Policies interact with ServiceNow form fields and user actions.	High
4	**Transactions processing**	The system validates form data before submission. Client Scripts perform client-side validation, while UI Policies control field behavior based on conditions.	High
5	**Reporting**	Authorized users should be able to view and verify configured Client Scripts and UI Policies, including their conditions and actions.	Medium
6	**Business rules, etc.**	Client Scripts should validate user input. UI Policies should make fields mandatory, read-only, or visible/hidden according to specified conditions.	High

S.No	Requirement Category	Requirement Description	Priority
7	**Compliance to laws or regulations**	The solution should follow organizational security and privacy requirements and should not expose confidential or unauthorized user information.	Medium
8	**Other**	The system should support testing, updating, and maintaining Client Scripts and UI Policies without affecting unrelated form functionality.	Medium

The categories above directly follow the structure in your uploaded template.

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	**Performance & Speed**	Client Scripts and UI Policies should execute quickly when users interact with the form.	Form actions should normally respond within **2 seconds**.
2	**Scalability**	The solution should continue working when the number of users, forms, fields, and policies increases.	Should support the expected number of users without noticeable performance problems.
3	**Security & Data Privacy**	User data and configuration should be protected using ServiceNow access controls. Scripts should not expose sensitive information.	Only authorized users can modify scripts and policies; no sensitive data is exposed.
4	**Reliability & Availability**	Client Scripts and UI Policies should consistently execute when their defined conditions are satisfied.	At least **99% successful execution** under normal operating conditions.
5	**Usability & Accessibility**	Forms should be simple to use. Validation messages and field changes should be clear to users.	Users should be able to complete forms with minimal unnecessary steps and understand validation messages.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
6	**Other**	The solution should be easy to maintain, test, and update by authorized administrators.	Configuration changes should be documented and should not affect unrelated functionality.

These NFR categories match the template's Performance, Scalability, Security & Data Privacy, Reliability & Availability, Usability & Accessibility, and Other sections.

Final Project Description

Project Name: Implement Client Script and UI Policy

Main Objective:
To implement **Client Scripts** for client-side validation and **UI Policies** for dynamically controlling form fields such as **visibility, mandatory status, and read-only status** in ServiceNow.
