Date	30 September 2026
Team ID	6ab3ec14b5170a9b58b3a658
Project Name	Implement Client Script and UI Policy
Maximum Marks	5 Marks

1. CUSTOMER SEGMENT(S) [CS]

- ServiceNow administrators
- Service desk employees
- Employees who use ServiceNow forms
- Users who enter information into ServiceNow forms

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

- Incorrect or incomplete data entry — **Frequent**
- Users forget mandatory information — **Frequent**
- Unnecessary fields are displayed — **Frequent**
- Users need to correct form errors repeatedly — **Occasional**

3. TRIGGERS TO ACT [TR]

- User enters or changes a field value
- User selects a particular option
- A specific form condition becomes true
- User tries to submit incomplete or invalid information

4. EMOTIONS BEFORE / AFTER [EM]

Before:

- Confusion
- Frustration
- Difficulty completing forms
- Uncertainty about required fields

After:

- Confidence
- Easier form completion
- Less confusion
- Better user experience
-

5. AVAILABLE SOLUTIONS — PROS & CONS [AS]

Pros:

- Provides real-time validation
- Dynamically controls form fields
- Reduces incorrect data entry
- Improves user experience

Cons:

- Requires proper configuration
- Scripts and policies need maintenance
- Incorrect configuration can affect form behavior

6. CUSTOMER LIMITATIONS [CL]

- Users may have limited ServiceNow knowledge
- Administrators need configuration knowledge
- Manual validation can cause errors
- Users may enter incomplete information
- Different users may have different roles and permissions

7. BEHAVIOR + ITS INTENSITY [BE]

- Users frequently enter and modify information in ServiceNow forms
- Users frequently interact with mandatory and optional fields
- Validation problems may occur during form submission
- Users may repeatedly correct invalid information

8. CHANNELS OF BEHAVIOR [CH]

ONLINE:

- ServiceNow web application
- ServiceNow forms
- Browser-based form interaction
- Validation messages

OFFLINE:

- Configuration
- Testing
- Documentation
- Administrator training

9. PROBLEM ROOT / CAUSE [RC]

- Lack of real-time client-side validation
- Static form behavior
- Fields are not dynamically controlled
- Users may not know which fields are required
- Incorrect or incomplete user input
-

10. YOUR SOLUTION [SL]

Implement Client Script and UI Policy in ServiceNow.

The **Client Script** will validate user input on the form and provide immediate feedback.

The **UI Policy** will dynamically control fields by making them:

- Visible or hidden
- Mandatory or optional
- Read-only or editable

Final Problem-Solution Fit Statement

The “Implement Client Script and UI Policy” project solves ServiceNow form-related problems by providing real-time validation and dynamic field control. It reduces incorrect data entry, makes forms easier to complete, and improves the overall user experience.
