Project Title	Implement Client Script and UI Policy
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposal report aims to improve form behaviour and data quality on the ServiceNow platform by implementing Client Scripts and UI Policies. It addresses incomplete and invalid user input, promising cleaner records, fewer errors, and a better experience for users. Key features include condition-based UI Policies and onLoad, onChange and onSubmit Client Scripts.

Project Overview	
Objective	To implement Client Scripts and UI Policies on a ServiceNow form so that fields behave dynamically, user input is validated in the browser, and users are guided to enter correct data quickly.
Scope	The project covers designing and configuring UI Policies (to make fields mandatory, read-only or visible/hidden based on conditions) and Client Scripts (onLoad, onChange and onSubmit) on a selected table, and testing their behaviour on the form.
Problem Statement	
Description	Forms without client-side logic let users leave required fields empty, enter invalid values, or see fields that are irrelevant to their request. This leads to incomplete records, rework, and a poor user experience.
Impact	Adding client-side rules improves data quality, reduces errors and follow-up corrections, speeds up form completion, and gives users a cleaner, more intuitive interface.
Proposed Solution	
Approach	Use UI Policies for simple, condition-based form behaviour that needs no code, and Client Scripts for logic that needs JavaScript, such as custom validation, alerts and dynamic field updates. Each rule is created, tested on the form, and refined.

Key Features	• UI Policies that set fields to mandatory, read-only or hidden based on conditions. • onLoad Client Script that prepares the form when it opens. • onChange Client Script that reacts when a field value changes. • onSubmit Client Script that validates data before the record is saved. • Testing of all rules to confirm they work as expected.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop/PC, Intel i5 or equivalent (no GPU needed)
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Platform	Cloud platform used for the project	ServiceNow Personal Developer Instance (PDI)
Scripting	Language used for client-side logic	JavaScript (Client Scripts), UI Policy conditions and scripts
Development Environment	IDE / browser	Google Chrome (or Edge), ServiceNow form and script editor
Data		
Data	Source, size, format	Sample records on a ServiceNow table (for example Incident or a custom table) created in the PDI
