Solution Architecture

Date	30 September 2026
Team ID	6ab3ec14b5170a9b58b3a658
Project Name	Implement Client Script and UI Policy
Maximum Marks	2 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	The Incident form where agents enter data. It runs the UI Policies and Client Scripts in the browser, showing mandatory field markers, guidance messages and validation errors instantly.	Web browser, ServiceNow Incident form, JavaScript, g_form API
Platform Web / Application Server	Serves the form and the active rule definitions to the browser, and saves the incident only after client-side validation passes.	ServiceNow instance (Personal Developer Instance), platform-managed load balancing
Rule Logic (UI Policies & Client Scripts)	Two UI Policies make Configuration item and Description mandatory on conditions; three Client Scripts show guidance on load, react to Urgency changes and block short Short descriptions on submit.	UI Policies and UI Policy Actions, Client Scripts (onLoad, onChange, onSubmit), JavaScript
Database	Stores incident records and the definitions of the UI Policies and Client Scripts. Configuration changes are tracked so they can be moved to other instances.	ServiceNow database: incident, sys_ui_policy, sys_ui_policy_action, sys_script_client tables; Update Sets
